A Short Guide to Homework Presentation

July 2, 2002

- Homework is due every Tuesday at the start of class. Please keep the challenge problems on a separate sheet and hand them in all at once at the end of the course.

- Every Homework assignment should be stapled before you hand it in.

- Write legibly. You do not have to type your homework but it will be helpful if I can read it.

- Try to keep the problems in order so that I do not need to hunt to find your answer.

- Show your work.

- Use words to explain your work, but do not be verbose. You do not have to follow each algebraic manipulation with a sentence, but do not just write equations either.

- When you are unable to finish a problem indicate what you are stuck on. This will help me give you partial credit.

- Leave room between problems and in the margins for comments.

- You are welcome to collaborate with other students, but you must write and hand in your own copy and you must list all of your collaborators. If I receive two assignments that are identical this could be considered plagiarism.
