## Qualifying exam, Fall 2006, Day 1

(1) Let $G_{1}$ and $G_{2}$ be finite groups, and let $V_{i}$ be a finite dimensional complex representation of $G_{i}$, for $i=1,2$. Give $V_{1} \otimes_{\mathbb{C}} V_{2}$ the structure of a representation of the direct product $G_{1} \times G_{2}$ by the rule

$$
\left(g_{1}, g_{2}\right)\left(v_{1} \otimes v_{2}\right):=\left(g_{1} v_{1}\right) \otimes\left(g_{2} v_{2}\right)
$$

(a) Show that if $V_{1}$ and $V_{2}$ are irreducible representations of $G_{1}$ and $G_{2}$, respectively, then $V_{1} \otimes V_{2}$ is an irreducible representation of $G_{1} \times G_{2}$.
(b) Show that every irreducible representation of $G_{1} \times G_{2}$ arises in this way.
(2) Let $R$ be the polynomial ring on 9 generators $\mathbb{C}\left[a_{11}, a_{21}, \ldots, a_{23}, a_{33}\right]$, and let $A$ be a matrix

$$
\left(\begin{array}{lll}
a_{11} & a_{12} & a_{13} \\
a_{21} & a_{22} & a_{23} \\
a_{31} & a_{32} & a_{33}
\end{array}\right)
$$

with values in $R$. Let $I$ be the ideal in $R$ generated by the entries of $A^{3}$.
(a) Show that the subvariety $X$ of $\mathbb{A}^{9}$ defined by $I$ is irreducible.
(b) Let $J$ be the ideal of polynomials in $R$ that vanish identically on $X$. Does $J$ equal $I$ ?
(3) Prove that for $n=1,2,3, \ldots$

$$
\frac{1}{2 \pi} \int_{0}^{2 \pi} \cos (n \theta-2 \sin \theta) d \theta=\sum_{k=0}^{\infty} \frac{(-1)^{k}}{k!(n+k)!}
$$

Hint: consider the function $z \mapsto e^{z-1 / z}$.
(4) Prove that $\pi_{1}$ of a topological group is abelian.
(5) Let $f: Y \rightarrow X$ be a smooth embedding of a manifold $Y$ into a manifold $X$. Let $X$ be equipped with a Riemannian metric $\bar{g}$ with the associated Levi-Cevita connection $\bar{\nabla}$ on $T X$. Let $g=f^{*} \bar{g}$ be the induced metric on $Y$, with Levi-Cevita connection $\nabla$. For $\eta, \xi \in T Y$ define

$$
\Psi(\eta, \xi)=\bar{\nabla}_{\left(f_{*} \eta\right)}\left(f_{*} \xi\right)-\left.f_{*}\left(\nabla_{\eta} \xi\right) \in T X\right|_{Y}
$$

Show that $\Psi$ is a well-defined tensor field in $\operatorname{Sym}^{2}\left(T^{*} Y\right) \otimes \mathcal{N}_{Y / X}$, where $\mathcal{N}_{Y / X}$ is the normal to $Y$ in $X$, i.e., $\mathcal{N}_{Y / X}:=\left.T Y^{\perp} \subset T X\right|_{Y}$.
(6) Let $B$ be the unit ball in $\mathbb{R}^{n}$. Prove that the embedding $C^{k+1}(B) \rightarrow C^{k}(B)$ is a compact operator.

## Qualifying exam, Fall 2006, Day 2

All problems are worth 10 points. Problems marked with * will give extra bonus
(1) Let $R$ be a Noetherian commutative domain, and let $M$ be a torsion-free $R$ module. (I.e., for $0 \neq r \in R$ and $0 \neq m \in M$ implies $r \cdot m \neq 0$.)
(a) Show that if $R$ is a Dedekind domain and $M$ is finitely generated, then $M$ is a projective $R$-module.
(b) Give examples showing that $M$ may not be projective if either $R$ is not Dedekind or $M$ is not finitely generated.
(2) Let $X$ be the blow-up of $\mathbb{A}^{2}$ at 0 , and let $Y \subset X$ be the exceptional divisor (i.e., the preimage of 0 ). Consider the line bundles $\mathcal{L}_{n}:=\mathcal{O}_{X}(n \cdot Y)$ for $n \in \mathbb{Z}$. Calculate $\Gamma\left(X, \mathcal{L}_{n}\right)$.
(3) Does there exist a nonconstant holomorphic function $f$ on $\mathbb{C}$ such that $f(z)$ is real whenever $|z|=1$ ?
(4) Let $X$ be the union of the unit sphere in $\mathbb{R}^{3}$ and the straight line segment connecting the south and north poles.
(a) Calculate $\pi_{1}(X)$.
( $\left.\mathrm{b}^{*}\right)$ Calculate $\pi_{2}(X)$, and describe $\pi_{2}(X)$ as a $\mathbb{Z}\left[\pi_{1}(X)\right]$-module.
(5) Show that a curve in $\mathbb{R}^{3}$ lies in a plane if and only if its torsion $\tau$ vanishes identically. Identify those curves with vanishing torsion and constant curvature $k$.
(6) Let $B$ be the unit ball in $\mathbb{R}^{n}$. Recall that if $f: B \rightarrow \mathbb{C}$ is a measurable function we define, for $0<p<\infty$, the $L^{p}(B)$ norm of $f$ by

$$
\|f\|_{p}=\left(\int_{B}|f|^{p} d x\right)^{1 / p}
$$

and the $L^{\infty}$ norm of $f$ by

$$
\|f\|_{\infty}=\inf \{a \geq 0:\{x \in B:|f(x)|>a\} \text { has Lebesgue measure } 0\}
$$

The spaces $L^{p}(B)$ and $L^{\infty}(B)$ are the spaces of measurable functions on $B$ with finite $L^{p}$ and $L^{\infty}$ norms, respectively. Show that if $f \in L^{\infty}$ then

$$
\|f\|_{\infty}=\lim _{q \rightarrow \infty}\|f\|_{q}
$$

## Qualifying exam, Fall 2006, Day 3

All problems are worth 10 points. Problems marked with * will give extra bonus
(1) Let $G$ be a finite $p$-group, $N$ a normal subgroup, $Z$ the center of $G$. Prove that $Z \cap N$ is non-trivial.
(2) Let $\operatorname{Gr}(k, n)$ be the Grassmannian of $k$-planes in $\mathbb{C}^{n}$, and let $W$ be a fixed $d$ plane in $\mathbb{C}^{n}$ with $k+d \geq n$. Let $S_{i}$ be the subset of $\operatorname{Gr}(k, n)$, consisting of $k$-planes $V$, for which $\operatorname{dim}(V+W) \leq n-i$.
(a) Show that $S_{i}$ is a closed subvariety of $\operatorname{Gr}(k, n)$.
(b) Find the dimension of $S_{i}$.
(c*) Show that the singular locus of $S_{i}$ is contained in $S_{i+1}$.
(3) Evaluate

$$
\int_{-\infty}^{\infty} \frac{\sin x}{x^{2}+x+1} d x
$$

(4) Formulate the Poincaré duality theorem for orientable compact manifolds with boundary.
(5) Let $G$ be a Lie group. Let $\mathfrak{h}$ be a Lie subalgebra of $\mathfrak{g} \subset \operatorname{Lie}(G)$. Show that there exists a unique Lie subgroup $H \subset G$ with $\mathfrak{h}=\operatorname{Lie}(\mathrm{H})$.
(6) Let $f \in L_{1}(\mathbb{R})$ and $f_{\epsilon}:=\epsilon^{-1} f(x / \epsilon)$. Prove that $\lim _{\epsilon \rightarrow+0} f_{\epsilon}$ exists in the space $\mathcal{D}^{\prime}(\mathbb{R})$ and find it. Calculate the following limits in $\mathcal{D}^{\prime}(\mathbb{R})$ :

$$
\lim _{\epsilon \rightarrow+0} \frac{1}{\sqrt{\epsilon}} e^{-\frac{x^{2}}{\epsilon}}, \quad \lim _{\epsilon \rightarrow+0} \frac{\epsilon}{x^{2}+\epsilon^{2}}
$$
